Dear Hiring Team at Black Canyon Consulting,

Last year, I designed a supervised-learning diagnostic framework at Intuitive Surgical that won the Best Local Impact award at the 2025 AI Fair, showcasing my ability to build production-ready applications that address real-world challenges. Your need for a Junior/Mid Full Stack Software Engineer aligns perfectly with my experience in developing systems that integrate complex data and deliver actionable insights.

In my current role as an NPI Manufacturing Technician & Process Automation at Intuitive Surgical, I applied Python and JavaScript to automate processes and improve operational efficiency. I built an n8n workflow that streamlined material transfer forms and developed a React Native productivity app, Lumen, which features bilingual support and utilizes Supabase for backend persistence. My experience with these technologies equips me to effectively contribute to building and maintaining web interfaces and backend services as outlined in your job description.

I am eager to bring my skills in Python, JavaScript, and React to Black Canyon Consulting, where I can help create structured, reusable knowledge assets. I am available for a conversation at your earliest convenience to discuss how my background and skills can meet the needs of your team.

Sincerely,
Jose Ivan Zaragoza
