Dear Hiring Team at Black Canyon Consulting,

Last year, I designed a supervised-learning diagnostic framework at Intuitive Surgical using Python and scikit-learn, which won the Best Local Impact award at the 2025 Intuitive AI Fair. This experience in building production systems aligns perfectly with your need for a Junior/Mid Full Stack Software Engineer who can develop and operate production-ready applications.

In my current role as an NPI Manufacturing Technician, I have built and maintained various systems, including an n8n workflow that automates material-transfer forms and a React Native productivity app with bilingual support. My proficiency in Python, JavaScript, and React, combined with my experience in containerization using Docker, equips me to effectively implement and improve backend services and web interfaces as outlined in your job description.

My proven ability to bridge technical roles and streamline processes will be invaluable in supporting the delivery of knowledge-first systems at Black Canyon Consulting. I am available for a conversation at your earliest convenience to discuss how my skills can contribute to your team.

Sincerely,
Jose Ivan Zaragoza
